PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of corporate experience in insurance technology, specializing in web development, system integrations, and Agile/Scrum methodologies. Proven track record of delivering end-to-end solutions from greenfield projects to complex API implementations. Expertise in low-code platforms, automation, and AI-driven process optimization with strong focus on code quality and collaborative development.

RELEVANT EXPERIENCE

Software Engineer, Endava

Nov 2021 - Present

REST APIs • Low-Code Tools • AI/ML Integration • UiPath RPA

- Delivered full-stack insurance technology solutions spanning multiple international markets, building greenfield web platforms and modernizing legacy systems using low-code frameworks and scalable API architectures.
- Drove API transformation initiative across legacy insurance systems, architecting scalable integration frameworks that enabled 5+ strategic broker partnerships and expanded market presence across multiple European territories.
- Pioneered AI-driven automation solutions including an intelligent access control system using UiPath and agentic AI that autonomously processes 200+ monthly software installation requests, achieving ISO 27001 certification compliance and eliminating manual approval workflows.
- Engineered automated contract processing solution leveraging Intelligent Document Extraction and AI agents to analyze vendor contracts with 90+ field recognition accuracy, eliminating manual data entry workflows and accelerating contract onboarding cycles.

Electronic Technician, Ultratech Int

Jan 2021 - Nov 2021

Debugging • Electronics • Mentoring • Hardware

- Diagnosed and resolved complex industrial HMI failures using systematic debugging and root cause analysis.
- Reduced equipment downtime through preventative maintenance protocols and rapid incident response.
- Mentored junior technicians on diagnostic techniques, accelerating team capability through structured knowledge transfer.

Online Computer Science Tutor, Freelance (Self-Employed)

Jan 2020 - Dec 2020

C++ • Mentoring

- Delivered 50+ online C++ programming lessons to high school students, improving technical proficiency and problem-solving skills.
- Designed interactive assessments and adaptive teaching strategies tailored to individual learning styles.

EDUCATION

Technical University of Cluj-Napoca

Oct 2017 - Jun 2021

Bachelor of Science in Electronics, Telecommunications, and Information Technology

- Thesis: Intelligent Solar Panel System – microcontroller-based monitoring and optimization
- Participated in coding competitions and self-study projects in JavaScript

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), Python, C++, SQL
- Frameworks & Libraries: React.js, Node.js, Express.js, Flask, Next.js, HTML5, CSS3
- Tools & Platforms: Git, GitHub, REST APIs, UiPath, VS Code, Postman, Low-Code Tools
- Databases: MongoDB, MySQL
- Practices: Agile/Scrum, CI/CD, Test-Driven Development, Code Review, Debugging

CERTIFICATIONS

UiPath Agentic Automation Associate • Modern React Bootcamp • Web Developer Bootcamp 2024 • Harvard CS50x • Unity Essentials Pathway & Unity Junior Programmer • Automate the Boring Stuff with Python Programming

PERSONAL PROJECTS

Campground Review Platform: Full-stack CRUD application with user authentication, RESTful API, and geolocation features (React, Node.js, Express, MongoDB) • Inventory Management System: React Native based inventory tracking with real-time updates • Burger Customization App: Interactive React app with dynamic pricing and order management
